Summary

Detail-oriented Software Engineer experienced in delivering commercial-grade projects in collaboration with Solution Architects. Proficient in **.NET Core**, **React**, **ts**, and **RESTful API development**, with a strong interest in integrating **AI** tools to streamline workflows. Demonstrated end-to-end development capabilities through side projects like [JobJourney - AI Job Search Assistant](#) and [StandTogether - non-profit public reporting and awareness platform](#), both focused on solving **real-world problems**.

Technical Knowledge

Programming Languages: **java**, **js**, **C#**, **python**

Full Stack: **React**, **.NET Core**

Database: **PostgreSQL**, **MySQL**

Cloud Services: **AWS**, **Azure**

DevOps & Tools: **Azure Devops**, **Docker**, **Github Actions**

AI Tools: **Claude code**, **cursor**, **OpenAI api**, **AssemblyAI api**, **Sora**

Employment History

Full Stack Developer

Nov 2024 – Present

DDT Holdings

Sydney, Australia

- **Designed, developed, and deployed** a commercial-grade **export management system** using **React TypeScript**, **.NET Core**, and **PostgreSQL**—delivering **end-to-end solutions** across **architecture**, **deployment**, **data processing**, and **automated testing**, while coordinating with **third-party providers** for seamless integration.
- **Designed microservices** using **Onion architecture** with clean **REST APIs**, secured by **IP whitelisting** and **firewall rules**.
- **Implemented role-based authentication and authorization** using **Entity Framework Identity** and **JWT middleware**.
- **Used EDIFabric** for **EDI parsing** and **object transformation**; integrated **Ghostscript** for **file format conversion**.
- **Built an automated email pipeline** with **Hangfire** to poll **Exchange emails** in a **VM**, push updates via **Azure Service Bus**, and send real-time alerts using **SignalR**.
- **Managed domain hosting** and traffic through **Cloudflare** and **nginx**; applied strict **firewall** and **IP whitelisting** for **API protection**.
- **Set up secure CI/CD pipelines** in **Azure DevOps** with **Key Vault** integration for **secrets/configs**, **automated DB migrations**, and **custom agents** to bypass firewall restrictions.
- **Added manual approval steps** between environments, coordinated **UAT**, and worked closely with **operations** and **third-party teams** to meet **business goals**.
- **Gained hands-on experience** working on **CRM** systems with functionality overlapping **ERP features**, including **sales tracking**, **finance modules**, and **user permissions**, providing relevant background for **enterprise system development**.

Full Stack Developing Intern

Jan 2024 – May 2024

SAM.Coach(<https://app.sam.coach>)

Sydney, Australia

- **Engineered a scalable CRM platform** using **.NET Blazor**, **MySQL**, **EF Core**, **Azure services**, and **RESTful APIs**; collaborated on designing and automating **CI/CD pipelines** with **Azure DevOps** for reliable, repeatable deployments.
- **Developed key business modules** including **sales tracking**, **user management**, and **customer feedback systems**; integrated **data analytics** to enable actionable insights and improve **operational efficiency**.
- **Designed intuitive, responsive UIs** using **Figma**, following **user-centered design principles** and **accessibility standards** to ensure consistent cross-device experiences.
- **Led iterative UAT cycles**, coordinating **cross-functional teams** to identify and resolve issues, optimizing **performance**, **usability**, and overall **client satisfaction** through continuous feedback loops.
- **Spearheaded technical integration** and authored thorough **documentation** for successful **Zoom Marketplace** launch, ensuring full **platform compliance** and smooth user onboarding.
- **Recognized for strong communication skills**, adherence to **clean, maintainable coding practices**, and consistent delivery within tight timelines, while staying adaptable to **evolving business needs**.

Student Life Ambassador

Feb 2023 – Dec 2024

University Of Sydney

Sydney, Australia

- **Delivered personalized support** and conducted **engaging information sessions** for prospective students and campus visitors; facilitated **detailed surveys** to gather insights and enhance **student outreach strategies**.
- **Led planning and execution of O-Week activities**, managing **strategic wayfinding**, providing **hands-on event support**, and administering **satisfaction surveys** to improve **participant experience** and **event outcomes**.
- **Actively contributed** to major initiatives including the **university-wide consent campaign**, **campus design improvements**, and **usability testing** for the new **university website**, ensuring alignment with **student needs**.
- **Compiled and communicated comprehensive feedback** to **key stakeholders** to help refine **student services** and streamline **administrative processes**, promoting a more **accessible, efficient, and student-centric** campus environment.

Projects

StandTogether

May 2025 – Present

Individual Project, Sydney (<https://standtogether.club>)

- Built and deployed a non-profit full-stack reporting platform (**Next.js**, **.NET Core**, **PostgreSQL**) for a youth crime awareness initiative; selected as 6.21 protest's official site and supported police with evidence.
- Featured in [SBS interviews](#) and other media coverage; achieved **3,000+ visits** and **30,000+ event interactions** in one week, with **50+ user-submitted incidents** contributing to **official data collection** and increased **public engagement**.
- Hosted on **AWS EC2** with **Azure PostgreSQL**, secured with **Nginx** and **Cloudflare**, automated deployments via **GitHub Actions**.
- Integrated **Google OAuth** for secure login, **Cloudinary** for **media management**, **OpenAI** for **content moderation**, and **AWS SES** for **transactional email delivery**.
- Leveraged **Leaflet** for **interactive geospatial visualization**, **Framer Motion** for **smooth UI transitions**, and **i18next** for **multilingual support**; developed **red/blue themes** to distinguish between **violence** and **justice** narratives.
- Engineered **robust authentication** and **role-based authorization** using **JWT middleware** and **EF Core Identity**, enabling **localized access control**, **IP logging**, and improved **credibility**, **auditability**, and **user accountability**.

Jobjourney

Feb 2025 – Present

Individual Project, Sydney (<https://jobjourney.me>)

- Built a **full-stack job search automation platform** with a **React TypeScript frontend** and **.NET Core backend**, using **PostgreSQL** and **EF Core**. Deployed frontend and backend on separate **AWS EC2 instances** for **scalable, high-performance** operation.
- Integrated **Cloudinary** for **media storage**, **Google OAuth** for secure authentication, **Google Drive API** for storing **CVs and cover letters**, and **Stripe** for smooth **subscription and payment workflows**.
- Developed core backend features including **JWT middleware**, **EF Identity**, **OpenAI-powered CV-JD matching** using a custom **MCP**, **cover letter generation**, and **fast profile import**, enabling **CV-based setup in under one minute**.
- Built a **Chrome extension** (listed on the **Google Web Store**) that enables **data scraping** from job sites, **job saving**, and **real-time AI analysis**, creating a **streamlined job application experience**.
- Designed a **next-gen floating header UI** with **12 transformable styles** to save space and enhance content visibility; created a **deploy-free, one-click portfolio builder** using **MUI** and **ReactBits**, generating **shareable links** for instant use.
- Leveraged **AssemblyAI**, **OpenAI**, and **MCP** to analyze **tone**, **fluency**, and **emotion**, powering an **advanced mock interview feature** that helps users prepare for both **technical** and **behavioral interviews**.
- Achieved **750+ users**, **360K+ jobs searched**, **1,050+ searches**, and **1,050+ job saves**, with adoption by job seekers seeking a **smart, AI-assisted job-hunting experience**.

Next-gen Mobile Repairing Planform – Mr EXPRESS (Leader)

Feb 2024 – June 2024

University of Sydney(<https://www.mrxpress.com.au/>)

- Led a team of five to develop a **mobile repair platform** using **Laravel**, **React**, **MySQL**, **Eloquent ORM**, integrating **RESTful APIs**.
- Designed the **system architecture** and managed **client communications** to ensure **timely delivery** and **project transparency**.
- Utilized **GitHub** for **DevOps** and implemented **Agile workflows** for efficient **sprint planning**, **issue tracking**, and **version control**.
- Implemented **real-time notifications** and **referral systems** with **Laravel Observers** and **Pusher**, boosting **user engagement**.
- Defined **team roles** and **delivery workflows** to promote **clarity**, **accountability**, and smooth **development cycles**.
- Developed **modular, reusable UI components** and optimized **backend API design** to improve **scalability**, **maintainability**, and **platform performance**.
- Deployed the platform on **AWS**, configuring **secure production environments** with automated **monitoring**, **logging**, and **error handling** for high **availability** and **scalability**.
- Led final **product demonstrations** and **client Q&A sessions**, delivering polished handovers while aligning **stakeholder expectations** and gathering feedback for future improvements.

Education

Master of Computer Science: Software Engineering

Aug 2022 – June 2024

University of Sydney, Sydney, Australia

WAM: D
